

The Space Radiation Environment as It Relates to Electronic System Performance:

*Or Why Not to Fly Commercial Electronic
Components in Space*

Janet L. Barth, Michael A. Xapsos,

Kenneth A. LaBel, NASA/GSFC

ken.label@nasa.gov

Co-Manager, NASA Electronic Parts and Packaging (NEPP) Program

Group Leader, Radiation Effects and Analysis Group (REAG), NASA/GSFC

Project Technologist, Living With a Star (LWS) Space Environment Testbeds (SET)

Christian Poivey, SGT Corp* (now with MEL)

This presentation is supported by the NASA Electronic Parts and Packaging (NEPP) Program

28th Annual AAS Guidance & Control Conference, Breckenridge, Colorado - Space Radiation Environment presented by Kenneth A. LaBel - Feb 8, 2005

Outline

- **The Space Radiation Environment Overview**
- **The Environment in Action**
 - **Solar Event from 2003**
- **Real Estate**
 - **Location and Timing**
- **Engineering Models**
- **Final Remark**

28th Annual AAS Guidance & Control Conference, Breckenridge, Colorado - Space Radiation Environment presented by Kenneth A. LaBel - Feb 8, 2005

2

The NATURAL Space Radiation Environment

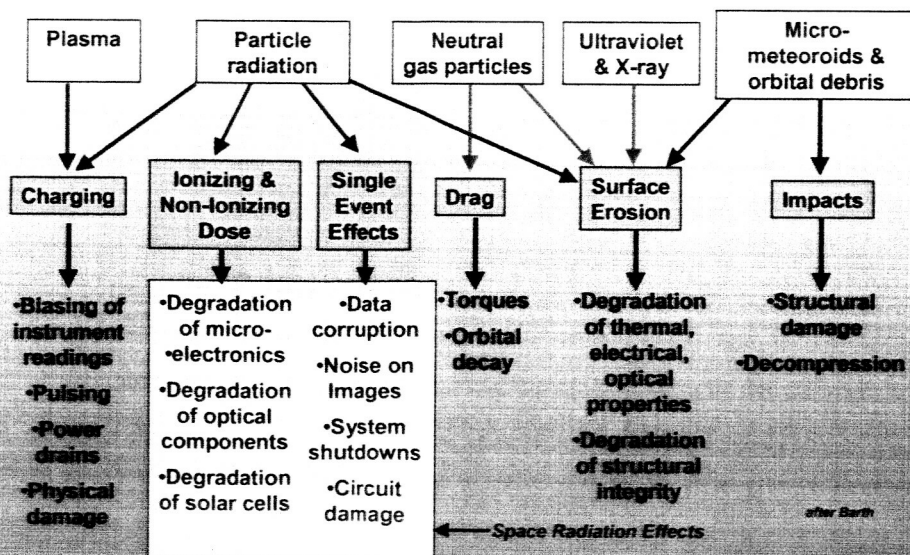

STARFISH detonation -

Nuclear attacks are not considered in this presentation

28th Annual AAS Guidance & Control Conference, Breckenridge, Colorado - Space Radiation Environment presented by Kenneth A. LaBel - Feb 8, 2005

Space Environments and Related Effects

28th Annual AAS Guidance & Control Conference, Breckenridge, Colorado - Space Radiation Environment presented by Kenneth A. LaBel - Feb 8, 2005

What is the Space Radiation Environment Hazard?

- Energetic particles
 - Protons, Electrons, Heavy ions (ex., charged Fe ion)
- Particles can come from the Sun
 - Ex., Solar events
- Particles can be “trapped”
 - Located within a magnetic field
 - Ex., Van Allen Belts
- Particles can come from somewhere else in the galaxy
 - Ex., Galactic Cosmic Rays (GCRs) – Heavy ions of “unknown” origin
- Sun (solar cycle) acts as modulator for environment

28th Annual AAS Guidance & Control Conference, Breckenridge, Colorado – Space Radiation Environment presented by Kenneth A. LaBel – Feb 8, 2005

5

Near-Earth Space Radiation Environment

after
Nikkei Science, Inc.
of Japan, by K. Endo

Deep-space missions may also see: neutrons from planetary background, nuclear source or other trapped particle belts
Atmosphere and terrestrial may see GCR and secondary particles

28th Annual AAS Guidance & Control Conference, Breckenridge, Colorado – Space Radiation Environment presented by Kenneth A. LaBel – Feb 8, 2005

6

Solar Particle Events

Holloman AFB/SOON

- Cyclical (Solar Max, Solar Min)
 - 11-year AVERAGE (9 to 13)
 - Solar Max is more active time period
- Two types of events
 - Gradual (Coronal Mass Ejections – CMEs)
 - Proton rich
 - Impulsive (Solar Flares)
 - Heavy ion rich
- Abundances Dependent on Radial Distance from Sun
- Particles are Partially Ionized
 - Greater Ability to Penetrate Magnetosphere than GCRs
 - Also generates neutrons in the atmosphere

28th Annual AAS Guidance & Control Conference, Breckenridge, Colorado – Space Radiation Environment presented by Kenneth A. LaBel – Feb 5, 2005

Sunspot Cycle: An Indicator of the Solar Cycle

after Lund Observatory

Sunspot Numbers

Length Varies from 9 - 13 Years
7 Years Solar Maximum, 4 Years Solar Minimum

28th Annual AAS Guidance & Control Conference, Breckenridge, Colorado – Space Radiation Environment presented by Kenneth A. LaBel – Feb 5, 2005

Solar Proton Event - October 1989

Proton Fluxes – “99% Worst Case Event”

GOES Space Environment Monitor

20th Annual AAS Guidance & Control Conference, Breckenridge, Colorado – Space Radiation Environment presented by Kenneth A. LaBel – Feb 8, 2005

9

Free-Space Particles: Galactic Cosmic Rays (GCRs) or Heavy Ions

• Definition

- A GCR ion is a charged particle (H, He, Fe, etc)
- Typically found in free space (galactic cosmic rays or GCRs)
 - Energies range from MeV to GeVs for particles of concern for SEE
 - Origin is unknown
- Important attribute for impact on electronics is how much energy is deposited by this particle as it passes through a semiconductor material. This is known as Linear Energy Transfer or LET (dE/dX).

CREME 96, Solar Minimum, 100 mils (2.54 mm) Al

20th Annual AAS Guidance & Control Conference, Breckenridge, Colorado – Space Radiation Environment presented by Kenneth A. LaBel – Feb 8, 2005

10

Trapped Particles in the Earth's Magnetic Field: Proton & Electron Populations

AP-8 Proton Model

AE-8 Electron Model

A dip in the earth's dipole moment causes an asymmetry in the picture above.
The South Atlantic Anomaly (SAA)

L-Shell

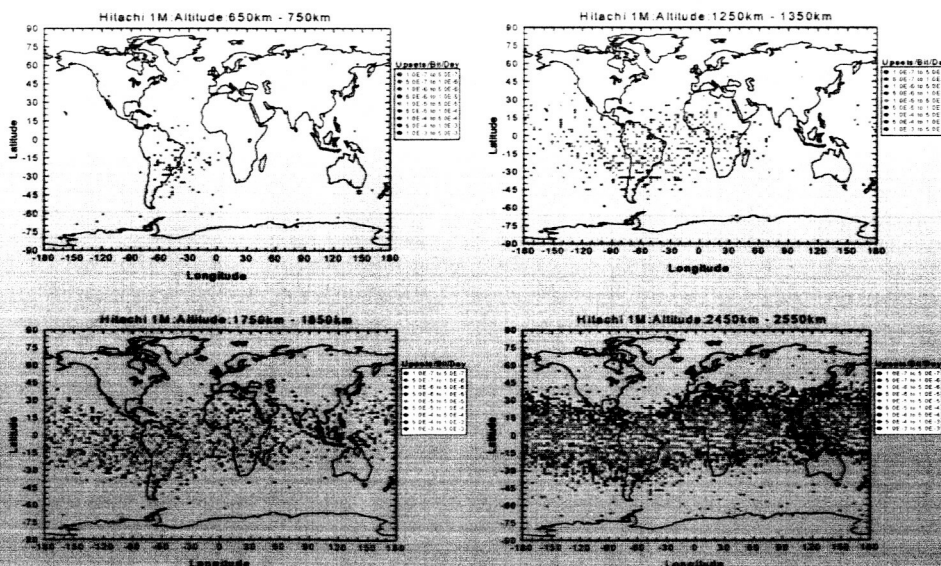

Geomagnetic cutoff implies some shielding protection from GCR and solar particles

28th Annual AAS Guidance & Control Conference, Breckenridge, Colorado - Space Radiation Environment presented by Kenneth A. LaBel - Feb 8, 2005

11

SAA and Trapped Protons: SRAM Upset Rates by Altitude Slices on CRUX/APEX

28th Annual AAS Guidance & Control Conference, Breckenridge, Colorado - Space Radiation Environment presented by Kenneth A. LaBel - Feb 8, 2005

12

Solar Cycle Effects: Modulator and Source

- **Solar Maximum**
 - Trapped Proton Levels Lower, Electrons Higher
 - GCR Levels *Lower*
 - Neutron Levels in the Atmosphere Are Lower
 - Solar Events More Frequent & Greater Intensity
 - Magnetic Storms More Frequent – > Can Increase Particle Levels in Belts
- **Solar Minimum**
 - Trapped Protons Higher, Electrons Lower
 - GCR Levels *Higher*
 - Neutron Levels in the Atmosphere Are Higher
 - Solar Events Are Rare

29th Annual AAS Guidance & Control Conference, Breckenridge, Colorado – Space Radiation Environment presented by Kenneth A. LaBel – Feb 8, 2005

13

The Environment in Action

"There's a little black spot on the sun today"

29th Annual AAS Guidance & Control Conference, Breckenridge, Colorado – Space Radiation Environment presented by Kenneth A. LaBel – Feb 8, 2005

Recent Solar Events – A Few Notes and Implications

- In Oct-Nov of 2003, a series of X-class (X-45!) solar events took place
 - High particle fluxes were noted
 - Many spacecraft performed safing maneuvers
 - Many systems experienced higher than normal (but correctable) data error rates
 - Several spacecraft had anomalies causing spacecraft safing
 - Increased noise seen in many instruments
 - Drag and heating issues noted
 - Instrument FAILURES occurred
 - Two known spacecraft FAILURES occurred
- Power grid systems affected, communication systems affected...

Proton fluxes during
"Halloween Event"

28th Annual AAS Guidance & Control Conference, Breckenridge, Colorado – Space Radiation Environment presented by Kenneth A. LaBel – Feb 9, 2005

17

SOHO LASCO C2 of the Halloween Solar Event of 2003

28th Annual AAS Guidance & Control Conference, Breckenridge, Colorado – Space Radiation Environment presented by Kenneth A. LaBel – Feb 9, 2005

18

GOES SXI View of the Halloween Event

28th Annual AAS Guidance & Control Conference, Breckenridge, Colorado - Space Radiation Environment presented by Kenneth A. LaBel - Feb 8, 2005

17

Solar Event Effect - Solar Array Power Output Degradation on CLUSTER Spacecraft

ANNEX 1. Evolution of the Solar Array Power from 24-Oct to 02-Nov 2003 when two solar radiation storms occurred (the time of these storms is indicated in the plot below). The degradation of the panels was about 1.4% and the average power loss is shown for each spacecraft. The pre-storm power are marked as "P" and labeled with "P".

Many other spacecraft to noted similar degradation as well.

28th Annual AAS Guidance & Control Conference, Breckenridge, Colorado - Space Radiation Environment presented by Kenneth A. LaBel - Feb 8, 2005

18

Selected Other Consequences

- Orbits affected on several spacecraft
- Power system failure
 - Malmö, Sweden
- High Current in power transmission lines
 - Wisconsin and New York
- Communication noise increase
- FAA issued a radiation dose alert for planes flying over 25,000 ft

Important note:
Effects propagated to
terrestrial levels

*A NASA-built
radiation monitor
that can aid
anomaly resolution,
lifetime degradation,
protection alerts, etc.*

28th Annual AAS Guidance & Control Conference, Breckenridge, Colorado - Space Radiation Environment presented by Kenneth A. LaBel - Feb 8, 2005

19

Real Estate: Location and Timing Drive Radiation Exposure

- Location
 - Where you fly and the route you take to get there impacts the levels of radiation exposure
 - GEO, LEO, Lunar, Mars, Jovian all have vastly different exposure levels
 - Where your system is within a spacecraft affects the hazard
 - Shielding plays a role in reducing some radiation exposure (but not a panacea!)
- Timing
 - Two issues impact exposure levels
 - When you fly
 - Activity level of environment
 - How long you fly
 - Cumulative exposure levels and activity level
 - Two examples to follow
 - LEO (Hubble), Lunar

28th Annual AAS Guidance & Control Conference, Breckenridge, Colorado - Space Radiation Environment presented by Kenneth A. LaBel - Feb 8, 2005

20

LEO Radiation Environment *Low Inclination*

- Pros
 - Fly below the earth's magnetic belts
 - Limited direct exposure to GCR and solar particles
 - Relatively low levels of particles for longer-term damage
 - Assumes location inside the spacecraft
- Cons
 - Exposure to trapped particles in SAA
 - Protons can induce noise or upsets in commercial and non-radiation hardened devices
 - Optics systems must also be concerned with trapped electrons
 - Some GCR and solar particles may penetrate
 - Secondaries

Sample particle interaction of a 100 MeV proton in a 5um Si block using the GEANT4 toolkit after Weller, 2004

28th Annual AAS Guidance & Control Conference, Breckenridge, Colorado – Space Radiation Environment presented by Kenneth A. LaBrie – Feb 8, 2005

21

Lunar Environment

- Pros
 - No trapped particles
 - Low “quiet” day particle levels
 - Low level, low energy neutrons
 - Created from GCR interaction with the lunar atmosphere/surface
- Cons
 - Full exposure to GCR
 - Can be destructive to commercial electronics
 - Full exposure to solar particles
 - Long-term and transient effects issues

28th Annual AAS Guidance & Control Conference, Breckenridge, Colorado – Space Radiation Environment presented by Kenneth A. LaBrie – Feb 8, 2005

22

Radiation Environment Models

- Trapped particles (Earth)
 - NASA standard is AP-8 (proton) and AE-8 (electron)
 - One model for Solar Max, one for Solar Min
 - These are static averages of old data
 - Updates being worked based on newer data, statistics, etc
 - Boeing TPM (Trapped Proton Model)-1 based on NOAA/TIROS and CRRES data
 - ONERA-LANL POLE model for GEO electrons
- Trapped Particles (Jovian)
 - Original model from the 1980's: Divine model (proton and electrons)
 - Update based on Galileo data: Galileo Interim Radiation Electron (GIRE) Model
- Solar Particles
 - NASA PSYCHIC model for solar protons and heavy ions
- GCR
 - NRL CREME96 model
 - NASA Badhwar and O'Neill model

28th Annual AAS Guidance & Control Conference, Breckenridge, Colorado - Space Radiation Environment presented by Kenneth A. LaBel - Feb 8, 2005

23

Final Remark

- Beyond the "standard" concerns of space radiation environment for electronics/optics, solar magnetic storms impact needs to be considered

28th Annual AAS Guidance & Control Conference, Breckenridge, Colorado - Space Radiation Environment presented by Kenneth A. LaBel - Feb 8, 2005
